

Audit 1 by ACOM

Find out what's really
going on in your business

ACOM
SOLUTIONS

Technology. Simplified.

How can Audit help?

You've deployed your mobile, telephone, internet and IT solutions to your workforce. Now, how do you know whether they're being used efficiently and effectively? **Could you be saving money** on services you're not using such as mobile data allowances? Are calls to certain numbers costing you more than they should? Are you paying for a particular service that your legacy devices can't even access?

Audit provides a **comprehensive analysis of your billed services** and wider hardware inventory. Once we report back to you, you're in a great position to decide how to make savings – or let us do that for you too!

Data generated by Audit can be exported to your own in-house systems for your further analysis and reporting.

We're experts in the field of mobile, communications and hardware systems across a huge range of industry sectors, with decades of experience.

You don't just get an unsupported software solution – you get **proper human expertise** to run that solution to its satisfactory conclusion and make sure that you maximise every possible saving you can make.

For example; we'll even help you by ringing up individual numbers on your itemised billing to **build the complete picture** and ensure that every last piece of data is accurate and accounted for.

- ✓ In most cases, Audit guarantees to save you hundreds, if not thousands, of pounds per month in bill savings alone.*
- ✓ No other solution analyses your billing and inventory data in such detail.
- ✓ Once analysed, we'll tell you exactly how to reduce your outgoings.
- ✓ And, if you want to take advantage of our industry expertise and established relationships with providers, you can ask us to switch you over to exclusive deals that'll save you even more.

*Depends on business size and total user base

Audit for billing:

- ✓ Plugs into your existing system, importing billing data from all your services eg mobile, landline, internet
- ✓ Builds upon the data, adding more detail than your provider gives you
- ✓ Highlights issues (such as errors, high charges and unusual activity)
- ✓ Generates meaningful reports on all services in one easy-to-read format, so that you can see what needs to change
- ✓ Breaks down usage right to the individual device, tells you how your usage needs to change / predicts how it will develop over time
- ✓ Suggests how all your tariffs can be adjusted to cumulatively bring about massive savings

Audit for hardware:

- ✓ Works with your existing inventory, or can even build an inventory system for you
- ✓ Comprehensively includes all hardware that could affect any aspect of your billing and maintenance costs
- ✓ Assesses the efficiency of your hardware solutions in the context of your business
- ✓ Links your hardware to your subscribed services, and examines whether they're matched
- ✓ Suggests how you can improve your hardware deployment in future

Remember, we are 100% independent and provide you with totally impartial advice and solutions – we're not owned by a telecoms giant and our only motivation is to get you savings.

Can I trust Audit?

Customer service: We won't leave you running software without support – Audit is a complete solution and a human being will help you to get the best out of it.

Reliable: We've never deployed Audit without it making a difference – significant monthly savings and more efficiently integrated systems.

Confidential and professional: Audit is a tried and tested solution – it complies with all necessary legislation and adheres to GDPR. Your company data never leaves your systems and is absolutely safe.

What we'll do:

Consultation – your in-person consultation is the starting point. We'll meet you and explain how Audit works, and what it can do for you.

Deployment – once you've decided you need Audit, we'll plug into your current system. All we need is your existing billing details and we'll do the rest. We'll also carry out any additional inventory agreed.

Aftercare – you'll start making savings, but it needn't end there. We're always on hand for support, troubleshooting, and systems advice. We're also ready to switch you to completely different service providers (with no disruption to your workflow) if you want to take the savings even further.
